Section 1: Maths Calculation Policy

This calculation policy supports the White Rose maths scheme we follow as our main scheme throughout the school. Progression within each area of calculation is in line with the programme of study in the 2014 National Curriculum. This calculation policy should be used to support children to develop a deep understanding of number and calculations. This policy has been designed to support children's learning using concrete, pictorial and abstract representations.

- Concrete representation— a pupil is first introduced to an idea or skill by acting it out with manipulatives. This is a 'hands on' component using manipulatives and is a foundation for conceptual understanding.
- Pictorial representation - a pupil has sufficiently understood the 'hands on' experiences performed and can now relate them to representations, such as a diagram or picture of the problem.
- Abstract representation—a pupil is now capable of representing problems by using mathematical notation, for example $12 \times 2 = 24$.

It is important that conceptual understanding is supported using representations to help secure understanding across the four operations. Reinforcement is achieved by going back and forth between these representations to help develop mastery.

Concrete

Pictorial

Abstract

Section 2: How to use this calculation policy?

This calculation policy is a guide for all staff at Alderman's Green and has been adapted from work by the NCETM and White Rose. All teachers have been given access to the White Rose Maths Premium resources and are required to base their planning around their year group's modules. These modules are affiliated to the workings of the 2014 Maths Programme of Study. The policy does not recommend one set of manipulatives over another, rather that, a variety of manipulatives are used to help embed a CPA approach while supporting the teaching of mastery to allow children flexibility and fluidity to move between different representations and contexts of Maths. For each of the four operations of number, different strategies are laid out, together with examples of what concrete materials can be used and how, along with suggested pictorial representations to ensure a consistent approach through the school. The principle of the concrete-pictorial-abstract (CPA) approach [Make it, Draw it, Write it] is for children to have a true understanding of a mathematical concept, they need to master all three phases within a year group's scheme of work.

Section 3: How do we teach Maths at Alderman's Green?

At Alderman's Green our curriculum intent is to ensure our children have the opportunity to talk, feel, question and reflect on their learning, this is also applicable to their mathematics learning journey. As a mathematician at Alderman's Green, we provide children creative and engaging lesson that will give them a range of opportunities to explore mathematics. We give all children a chance to feel a sense of achievement in Maths through our Bronze, Silver Gold approach underpinned by CPA approach in lessons. Through using the 'Rosenshine principles in action' approach, linked with the White Rose small steps, it helps us to develop a learning journey where children activate prior knowledge and new material is introduced in small steps with models and scaffolding for guided student practice. Before moving onto independent practice, AFL techniques (hinge questions etc) are used to check children's understanding and ensure any misconceptions are addressed. Learning is revisited on a weekly and monthly review through morning activities, maths starters and the spiral curriculum approach we take to our Maths learning. Through feedback children are able reflect on their achievements and are given ongoing opportunities to understand the next steps in their individual learning journey.

Through our spiral curriculum, learning is taught in shorter blocks where it is revisited and built upon through the academic year based on on-going assessment for learning. Staff use this knowledge to provide children to make rich connections across mathematical ideas to develop fluency, mathematical reasoning and competence in solving increasingly challenging problems.

Section 4: Addition at Alderman's Green

Key Vocabulary to be taught and rehearsed	sum, total, plus, add, altogether, and, more is equal to, is the same, double, parts and whole, how many more to make? How many more is.... than...?		
EYFS Objectives Addition	Concrete	Pictorial	Abstract
Have a deep understanding of numbers to 10 including the composition of each number. 	 		 $3 + 1 = 4$ 
Say a number that is one more than a given number.  BBC iPlayer - one more	 	 One more than 4 is 5. 	 $4 + 1 = 5$ One more than 4 is 5

Automatically recall number bonds up to 5 some up to 10, including double facts

BBC iPlayer - double trouble

Key Vocabulary to be taught and rehearsed	Add, addition altogether, sum, total, more, commutative, number facts/bonds. whole number, partition, is the same as / equal to, tens and ones, part-part whole, number bonds, number facts. Near double, double, one more, two more... ten more. How many more to make? How many more is ... than...? How much more is....?		
Year 1 Objectives	Concrete	Pictorial	Abstract
Read and interpret mathematical statements involving addition Write mathematical statements involving (+) and equals (=)		Use of pictures to add two numbers together. 	$4 + 3 = 7$ $7 = 4 + 3$  Include missing number questions to develop varied fluency. $7 = ? + 3$
Start at the biggest number and count on (Use of bead strings, numicon and cubes) Addition and subtraction of one-digit and two-digit numbers to 20 including 0.	 Start with largest number on the bead string and then count on to the smaller number 1 by 1 to find the answer.	Start with largest number on the number line and count on in ones to start with to build confidence 	5 + 12 = ? Start with the largest number in your head and count on the smaller number to find your answer.

Represent & use number bonds and related subtractions facts within 20.	 Tens Frame	Use of bar modelling to support related number facts within 20 ensuring appropriate representations of the bar.  $7 = 5 + \underline{\quad}$ $2 + \underline{\quad} = 7$ $7 = 5 - \underline{\quad}$ $7 - \underline{\quad} = 2$	Include missing number questions  $6 + 4 = 10$ $4 + 6 = 10$ $10 - 4 = 6$ $10 - 6 = 4$
Solve one-step problems that involve addition using concrete objects and pictorial representations, and missing number problems such as $7 = \underline{\quad} + 4$.	Use of ten frames, diennes, counters and cubes to support concrete approach. 	Circle the number sentence that matches this picture?  $3 + 3 = 6$, $8 = 4 + 3$, $4 = 3 + 1$, $4 + 3 = 7$	Faye buys two items at the shop that cost 20p altogether. Circle the objects she bought. 

Addition calculations must be represented with a missing number problem and different layouts to ensure children become develop automaticity in their key numbers e.g., $4 + \underline{\quad} = 7$ $7 = 3 + \underline{\quad}$

Key Vocabulary to be taught and rehearsed	addition, more, and, plus, altogether, sum, total, increase, partition, inverse operation, number facts/bonds missing number regrouping, tens boundary, exchange, is the same as/ equal to, par, part whole, bar modelling, commutative, double, near double, how many more to make? How many more is than...? How much more is....?		
Year 2 Objectives	Concrete	Pictorial	Abstract
To add multiples of 10 (Diennes, Beads strings or Numicon)	$30 + 20 = 50$ or $50 = 30 + 20$ 		$20 + 30 =$ $70 = 50 + 20$ $40 + \underline{\quad} = 80$ $60 = 20 + \underline{\quad}$
To use known number facts. (Part, part whole, ten frames and numicon)	Children explore ways of making numbers within 20  	Explore fact families within 20. Developing Fluency in these facts.  	Explore the commutativity of addition by swapping the addends to build a fact family. Explore the concepts of the inverse relationship of addition and subtract and use this to check calculations. $\square + 1 = 16$ $16 - 1 = \square$ $1 + \square = 16$ $16 - \square = 1$
To use known facts (diennes and ten frames to support)	$\square\square + \square\square = \square\square\square\square$ $3 + 3 = 6$  $30 + 30 = 60$	Children to draw Representations of hundrends, tensand ones. 	$3 + 4 = 7$ LEADS TO $30 + 40 = 70$ LEADS TO $300 + 400 = 700$ (Ensure discussion involves understand how the number is get bigger and by how many?)

To add 2-digit number and ones (with crossing the tens boundary - exchanging)	 $17 + 5 = 22$ (Use ten frame to make ten) Explore patterns such as $17 + 5 = 22$, $27 + 5 = 32$ $37 + 5 = 42$	Use part part whole and number line method to model.  $17 + 5 = 22$	Explore related facts. $17 + 5 = 22$ $5 + 17 = 22$ $22 - 17 = 5$ $22 - 5 = 17$ 
To add two-digit numbers (without crossing the tens boundary)	 Model using diennes, numicon and place value counters	 Use of number line and encourage bridging of ten using part whole model.	$23 + 14 = ?$  $40 + 10 = 50$ $3 + 4 = 7$ $50 + 7 = 57$
To add two-digit numbers (crossing the tens boundary - exchanging)	 Introducing children to the sneaky ten. Lots of opportunities of this practical.	Children can use pictorial representation using diennes or solve using the number line method. (Column method will be introduced in Year 3) 	Show calculations in different models to develop understanding of part, part whole and bar modelling 

Adding three 1 digit numbers (Numicon, ten frames)	 Encourage children to look for number bonds to 10 or doubles to add numbers more efficiently.	 Continue to look for efficient strategies rather than counting all the dots.	$\begin{array}{r} 4 + 7 + 6 = 10 + 7 \\ 10 \qquad \qquad \qquad = 17 \end{array}$ Combine the two numbers that make/ bridge then and the add on the third. 
To solve problems with addition including those with quantities and measures by using objects and pictures	Use base ten  	Draw tens and ones  	Part whole models and partitioning $41 + 8$  $1 + 8 = 9$ $40 + 9 = 49$ $36 + 25 =$  $30 + 20 = 50$ $5 + 5 = 10$ $50 + 10 + 1 = 61$
Regroup to make 10 (Crossing ten) Adding across ten (Ten frames)	Start with the biggest number and use the smaller number to make 10. (Use ten frames e.g., $6 + 5$) 	Use of pictures or a number line. Regroup or partition the smaller number to make 10.  $3 + 9 =$	Children to develop an understanding of equality (relationship between two quantities) e.g. $6 + \underline{\quad} = 11$ $6 + 4 = 10 + 1 = 11$

	Use of straws to make a bundle of 10 e.g., $8 + 7$ $8 + \underline{\quad} = 10$ $10 + \underline{\quad} = 15$ How many more straws do I need to make 10? How many more do I have left to add on? 	$9 + 5 = 14$ 	If I am at seven, how many more do I need to make 10? How many more do I add on now? $7 + \underline{\quad} = 11$ $7 + 3 = 10$ $10 + \underline{\quad} = 11$
--	--	--	--

Addition calculations must also be represented with missing numbers so children can make links to inverse operations, as well as seeing the questions represented in different ways in line with your curriculum.

Regular practise on key number facts is essential to ensure automaticity is continued to be built upon.

Key vocabulary to be taught and rehearsed	Add, addition, plus, altogether, more, sum, total, increase number facts/bonds, near double, double number line, count on, partition, commutative inverse, missing number, hundreds, tens, ones, column addition bar modelling, tens and hundred boundary. How many more to make? How many more is ____ than ____?		
Year 3 Objectives	Concrete	Pictorial	Abstract
Add 2-digit numbers together within 100 (Recapping of regrouping will need to be taught)	 Model using diennes, numicon and place value counters	 Use of number line and encourage bridging of ten using part whole model.	 $25 + 47$ $20 + 40 = 60$ $5 + 7 = 12$ $60 + 12 = 72$
To add multiples of 100 (using known facts)	Use known facts to add multiples of 100  $3 + 2 = 5$ $3 \text{ hundreds} + 2 \text{ hundreds} = 5 \text{ hundreds}$ $300 + 200 = 500$	 $300 + 200 = 500$	$345 - 200 =$ $454 = 254 + \underline{\quad}$
Add numbers with up to 3 digits using formal written method. (No exchanging)	 +	Children can draw tens and ones using a place value chart.  +	

	Children must be taught to always start with the ones. Use of base ten and lots of practical opportunities							
Column Addition with exchanging upto 3-digit numbers	Tens Ones Hundreds Tens Ones Hundreds Tens Ones Children need lots of practical exposure to see understanding ten ones = 1 ten and 10 tens = 1 hundred etc.	Children can draw pictorial representations of the column and place value counters to support understanding When children are solving problems encourage them draw a bar model to represent what it is asking them to 265 164 ? ? 265 164	Use of column addition, ensuring understand of place value at every stay of the calculation 126 + 217 = 343 H T O 1 2 6 + 2 1 7 3 4 3 H T O 1 2 6 + 2 1 7 3 4 3 H T O 1 2 6 + 2 1 7 3 4 3					
Estimate the answers to questions and use inverse operations to check answers.	Use of number lines, number squares to support children's understanding of estimating answers. 119 is close to 100 100 119 200 486 is close to 500 400 486 500 High Street School has 119 pupils. Main Road School has 486 pupils. Estimate how many pupils there are in total. 100 + 500 = 600 pupils There are approximately 600 pupils H T O 1 1 9 + 4 8 6 6 0 5 1 1	<table><tr><th>Question</th><th>Estimate</th><th>Exact answer</th></tr><tr><td>705 - 194</td><td></td><td></td></tr></table>	Question	Estimate	Exact answer	705 - 194		
Question	Estimate	Exact answer						
705 - 194								
Representing addition problems and selecting appropriate methods.	Bar modelling, part, part whole to helps children select apporiate methods. 275 + 99 = ? 374 275 99 275 + 99 = 374 38 23	Use representations to support choices of appropriate methods. 275 99						

In Autumn 1 regular practise on key number facts is essential to ensure automaticity is continued to be built upon so children can make links to inverse operations, as well as seeing the questions represented in different ways in line with your curriculum.

			I will add 100, then subtract 1 to find the solution.
Key vocabulary to be taught and rehearsed	Add, addition, plus, altogether, more, sum, total, increase, number facts/bonds, near double, double number line, count on, partition, commutative, inverse, missing number Hundreds, tens, ones, column addition bar modelling, tens, hundreds, thousands boundary. How many more to make? How many more is ____ than ____? How much more is...?		
Year 4 Objectives	Concrete	Pictorial	Abstract
Understanding numbers to 10,000	Base ten to understand the value of 4-digit numbers 2 thousand equals 2,000 1 thousand is 10 hundreds. 	Represent numbers using PV counters once children understand relationship between 1,000s and 100s  $2,000 + 500 + 40 + 2 = 2,542$	Understand partitioning of 4-digit numbers. To read 4-digit numbers on a number line. 
To add numbers up to 4 digits (without regrouping/exchanging)	Use of base 10 and counters to develop understanding. 	Continue to use pictorial representations to deepen understanding. 	
To add numbers up to 4 digits (with regrouping/exchanging)	 Lots of practical opportunities and discussion so children understanding each stage of the calculation.	 Supporting children to draw models to help understand the calculation.	Use of column addition, ensuring understand of place value at every stage of the calculation 

Addition calculations must also be represented with missing numbers so children can make continuous links to inverse operations as well as seeing the questions represented in different ways in line with your curriculum.

Key vocabulary to be taught and rehearsed	Add, addition, plus, altogether, more, sum, total, increase, number facts/bonds, near double, double number line, count on, partition, inverse, missing number, hundreds, tens, ones, column addition, bar modelling, tens, hundreds, thousands, ten thousands, millions, tenths boundary decimal, decimal point, How much more is...? How many more to make? How many more is ____ than ____? commutative		
Year 5 Objectives	Concrete	Pictorial	Abstract
To add whole numbers with more than 4 digits using formal written method.			
Add with up to 3 decimal places.	 Use of place value counters		
Solve addition multi step problems in contexts	Bar modelling, part, part whole to helps children select appropriate methods.  		

Addition calculations must also be represented with missing numbers so children can make links to inverse operations, as well as seeing the questions represented in different ways in line with your curriculum.

Key vocabulary to be taught and rehearsed	Add, addition, plus, altogether, more, sum, total, increase, number facts/bonds, near double, double number line, count on, partition, inverse, commutative, missing number, hundreds, tens, ones, column addition, bar modelling, tens, hundreds, thousands, ten thousands, millions, tenths boundary decimal, decimal point, How much more is...? How many more to make? How many more is ___ than ___?		
Year 6 Objectives	Concrete	Pictorial	Abstract
To add several numbers with more than 4 digits using formal written method.			
Adding several numbers with different numbers of decimal places (including money and measures):	Use of place value counters and place value mats 	Pictorial representations 	
Solve multi-steps addition problems	Bar modelling, part, part whole to helps children select appropriate methods. 		

Addition calculations must also be represented with missing numbers so children can make links to inverse operations, as well as seeing the questions represented in different ways in line with your curriculum.

Section 5: Subtraction at Aldermans Green

Key Vocabulary to be taught and rehearsed	How many more to make ..? How many more is..than.? Take away How many are left over? How many have gone? One less, two less.... How much less/fewer is ...?		
EYFS Subtraction Objectives	Concrete	Pictorial	Abstract
Find one less from a group of five objects, then ten objects.			One less than 5 is 4
Automatically recall number bonds (subtraction) up to 5 some up to 10.			$7 - 3 = ?$ 

--	--	--	--

Key Vocabulary to be taught and rehearsed	equal to, take, take-away, less, minus, subtract, leaves, difference between, how many more, how many fewer/less than, most, least count back, how many left, how much less is... One less, two less.... How many more is..than.?		
Year 1 Objectives	Concrete	Pictorial	Abstract
Subtract 1-digit numbers (ones) within 10	 $6 - 2 = 4$		$7 - 3 = ?$ 
Subtract one-digit and two-digit numbers to 20 including 0 (Bead strings, Numicon, Ten frames)	$10 - 2$  $12 - 5 =$		$15 - 4 = 11$ $10 - 6 = 4$
Represent and use number bonds and related subtraction facts within 20.	 Link to addition Use part, part whole model to inverse. If 10 is the whole and 6 is one of the part what would the other part be?	 Use of pictorial representations of objects to show part-part whole model.	 I know $6 - 4 = 2$ What else do you know? + = + = - = - =

Find the difference (Cubes, Bar modelling, Numicon)	 Use cubes to build towers to make bars to find the difference 	Count on to find the difference.  	Hannah has 23 sandwiches; Helen has 15 sandwiches. Find the difference between the number of sandwiches.
Solve one step problems that involve subtraction using concrete and pictorial representations.	Use of toys cars or other concrete resources e.g., dinosaurs, counters, cubes, 	There are 10 cars in a car park.  4 cars leave. How many cars are left in the car park?	Ann and Tom have 15 strawberries in total. Ann eats 6 strawberries How many strawberries do they have left?

Key Vocabulary to be taught and rehearsed	equal to, take, take-away, less, minus, subtract, leaves, difference between distance between, how many more, how many fewer/less than, most, least count back, how many left, how much less is...		
Year 2 Objectives	Concrete	Pictorial	Abstract
To subtract multiples of 10 (Diennes, Beads strings or Numicon)	$50 - 30 = 50$ or $30 = 50 - 20$ 	 $8 \text{ tens} - 3 \text{ tens}$ $80 - 30 = 50$ (Diennes, Numicon, Ten Frames, Bundles of straws in 10s)	$70 - 30 =$ $50 = 70 - 20$ $40 - \underline{\quad} = 20$ $60 = 90 - \underline{\quad}$
To use known subtraction number facts. (Part, part whole, ten frames and numicon)	$9 - 5$ or $9 - 4$ Use ten frames to allow children to create this calculations and begin to see links 	$9 - 5 = 4$ $9 - 4 = 5$ $19 - 5 = 4$ $19 - 4 = 5$ 	What subtraction facts do you know which can help use with this subtraction? $27 - 14 = ?$ ($7 - 4 = 3$) 

Recall subtraction facts to 20 fluently and derive and use related facts up to 100 (Diennes)	$8 - 3 = 5$  $80 - 30 = 50$ 	Eva has 2 red pens and 3 blue pens.  How many pens does Eva have? Tommy has 20 red pens and 30 blue pens.  How many pens does Tommy have?	$5 - 3 = 2$ $50 - 30 =$ $7 - 1 = 6$ $70 - 10 =$
To subtract two-digit numbers (without crossing the tens boundary)	Tens Ones  $37 - 14 = 23$	Tens Ones  $37 - 14 = 23$	Use a number line to find $78 - 45$.  More confident children can jump in multiples of 10.
To subtract 2-digit number and ones (with crossing the tens boundary - exchanging)	Tens Ones  $37 - 18 = 29$  Lots of practical exposure.	Tens Ones  $37 - 18 = 29$ 	Subtracting through counting back on a number line crossing tens boundary $54 - 29 = 25$ 

Use the inverse relationships
between addition and
subtraction to check
calculations
(Numicon, cubes, bar
modelling)

$$6 + 4 = 10$$

$$4 + 6 = 10$$

$$10 - 4 = 6$$

$$10 - 6 = 4$$

$$14 + 6 = 20$$

$$6 + 14 = 20$$

$$20 - 16 = 4$$

$$20 - 4 = 16$$

Inversion Loops

12	15
27	

How could you use your knowledge of
the inverse relationship to help you
check if this calculation is correct?

Key Vocabulary to be taught and rehearsed	equal to, take, take-away, less, minus, subtract, leaves, difference between distance between, how many more, how many fewer/less than, most, least count back, how many left, how much less is...					
Year 3 Objectives	Concrete	Pictorial	Abstract			
Subtract 2-digit numbers together within 100 (Recapping of regrouping will need to be taught)	 37 - 18 = 29	 37 - 18 = 29	Subtracting through counting back on a number line crossing tens boundary 54 - 29 = 25 			
To subtract multiples of 100 (using known facts)	 500 - 200 = 300	 500 - 200 = 300 Use the diagram to write 4 calculations. <table border="1"><tr><td>800</td></tr><tr><td>100</td></tr><tr><td>700</td></tr></table>	800	100	700	600 - 400 The answer is 200. How many questions can you think of that subtract hundred to make 200? 600 - 300 600 - 200 600 - 100 How do you know you have found them all? 600 - 0
800						
100						
700						
Subtract numbers up to 3 digits using formal written method. (No exchanging)	 454 - 122 =					

Column subtraction with exchanging up to 3-digit numbers	Hundreds Tens Ones Exploring and practise through diennes.	Hundreds Tens Ones	435 − 273 = 262 31 435 − 273 262
To check answers using the inverse operation.	20 17 + 3 or 3 + 17 20 − 17 = 3 20 − 3 = 17	The bar model 12 15 27 27 15 ?	Inversion Loops 12 27 + 15 − 15 12 15 27 How could you use your knowledge of the inverse relationship to help you check if this calculation is correct?

In Autumn 1 regular practise on key subtraction number facts is essential to ensure automaticity is continued to be built upon so children can make links to inverse operations, as well as seeing the questions represented in different ways in line with your curriculum.

Key Vocabulary to be taught and rehearsed	equal to, take, take-away, less, minus, subtract, leaves, difference between distance between, how many more, how many fewer/less than, most, least count back, how many left, how much less is...		
Year 4 Objectives	Concrete	Pictorial	Abstract
To subtract numbers up to 4 digits (without regrouping/exchanging)	 $2254 - 1132 =$	 $2254 - 1132 =$	$\begin{array}{r} 6276 \\ - 3153 \\ \hline \end{array}$ Also expose children to part whole model and bar method to show calculation.
To subtract numbers up to 4 digits (with regrouping/exchanging)	 Ensure children write out the calculation alongside any resources so they can see the link to the written column method	 $4,357 - 2,735 =$	

Solve subtraction and addition two step problems in contexts.

The cinema has 700 seats - 113 adults and 276 children come to see the film. How many empty seats are there?

Highlight the key information

Do step 1 of the calculation first using a written method if needed.

$$700 - (113 + 276)$$

700		
113	276	?

After focus on step 2 of the calculation.

$$700 - 389 =$$

700	
389	?

	The mass of a bag of marbles is 54.3g. These two marbles are removed from the bag. What is the mass of the bag of marbles now?								

Key Vocabulary to be taught and rehearsed	equal to, take, take-away, less, minus, subtract, leaves, difference between, distance between, how many more, how many fewer/less than, most, least count back, how many left, how much less is...		
Year 6 Objectives	Concrete	Pictorial	Abstract
To subtract several numbers with more than 4 digits using formal written method.			
Subtracting several numbers with different numbers of decimal places (including money and measures):			
Solve multi-steps subtraction problems	There are 14,364 people at a football. 3,301 of the crowd are children. How many more adults than children are there?		

Section 6: Multiplication at Alderman's Green

Key Vocabulary to be taught and rehearsed	Doubles, doubling, adding the same out. number patterns		
EYFS multiplication objectives	Concrete	Pictorial	Abstract
Explore and represent patterns within numbers up to 10, including doubles	 	 	$1 + 1 =$ $2 + 2 =$ $3 + 3 =$ $4 + 4 =$ $5 + 5 =$

Key Vocabulary to be taught and rehearsed	Groups of, equal groups, lots of, times, array, altogether, multiply, repeated addition,		
Year 1 Multiplication Objectives	Concrete	Pictorial	Abstract
To count in multiples of 2, 5 and 10 (Numicon, bead strings, cubes, dice)			 5, 10, 15, 20, 25, 30 Counting stick to support counting forwards and backwards in multiples of 2, 5 and 10.
To be able to count in repeated addition. (Numicon, bar modelling, bead strings, ten frames)	 10. + 10 + 10. + 10	 5 + 5 + 5 + 5 + 5 =	There are 3 plates. Each plate has 2 star biscuits on. How many biscuits are there?  2 + 2 + 2 = 6

To understand and read arrays	 Practical opportunities to create arrays to show multiplication sentences.	What repeated addition number sentences can you see here? 	Use this array to write any multiplication and repeated addition number sentences you might know. 
Solve one-step problems involving multiplication by calculating the answer using concrete objects, pictorial representations and arrays with the support of the teacher.	One bag holds 5 apples. How many apples do 4 bags hold? 	$5 + 5 + 5 + 5 = 20$ 	One bag holds 5 apples. How many apples do 4 bags hold? 

Key Vocabulary to be taught and rehearsed	Groups of, lots of, times, array, altogether, multiply, multiplied by, repeated addition, sets of, equal groups, times as big as, commutative. product,		
Year 2 Multiplication Objectives	Concrete	Pictorial	Abstract
Count in steps of 2, 3 and 5 from 0 in tens from any number forward and backward (Numicon, bead stings, cubes, 100 square, counting stick)			 Counting stick with post it notes to support counting forwards and backwards in multiples of 2, 5 and 10.
Recall and use multiplication facts for 2, 5 and 10-times tables.	 $\square \times 2 = 16$ $16 \div 2 = \square$ Use of counters, numicon to create arrays to explore relationships.	There are 12 cherries. There are $\square$ groups. There are $\square$ cherries in each group. $12 \div 2 = \square$ $2 \times \square = 12$ 	 $\square \times \square = \square$ $\square \times \square = \square$ $\square \div \square = \square$ $\square \div \square = \square$ I go to the bakery to buy 10 crumpets. I can fit 5 in each bag, so I need 2 bags. True or False? Explain your answer

Using array for multiplication	 5×4 4×3		True or False All of the number sentences can be used to find the total of the array $5 + 5 + 5 + 5 + 5 + 5$ $6 + 6 + 6 + 6 + 6$ $6 \text{ lots of } 5$ $5 \text{ lots of } 6$ $3 \times 5 + 3 \times 5$ $2 \times 5 + 2 \times 5 + 2 \times 5$ 
Show that multiplication of two numbers can be done in any order (commutative)		Use representations of arrays to show different calculations and explore commutativity  $3 \times 5 = 15$ $5 \times 3 = 15$	 What multiplication and repeated addition sentences can we get from this array?
Solve problems involving multiplication using materials, arrays, repeated addition, including problems in contexts	Match the picture to the times table fact.  3×5 2×5 1×5 5×5 How much money does Ron have?  Complete the multiplication. $\times$ =	What is the same about the number sentences? What is different? a)  b)  A sandwich costs £2 and a box of crayons costs £5  Jack buys 5 sandwiches and 3 boxes of crayons. How much does he spend in total? Use of bar modelling or pictures to support.	Ben has five marbles. Kemi has seven times that number. How many marbles does Kemi have?  The answer is 12 What could the multiplication be?

Key Vocabulary to be taught and rehearsed	Groups of, lots of, times, array, altogether, multiply, multiplied by, repeated addition, sets of, equal groups, times as big as, commutative, product, multiples of, scale up		
Year 3 Multiplication Objectives	Concrete	Pictorial	Abstract
Count in steps of 4, 8, 50, and 100 from 0 in tens from any number forward and backward	  8, 16, 24 etc.. Encourage daily counting in multiples	 4 8 12 16  8 16 24 32	  Counting stick with post it notes to support counting forwards and backwards in multiples of 4, 8, 50 and 100.
recall and use multiplication and division facts for the 3, 4 and 8 multiplication tables	 4 lots of 4 = $4 \times 4 = 16$  4 lots of 8 = $4 \times 8 = 24$	 4 8 12 16  8 16 24 32  Whitney has 10 packs of seeds? How many seeds does Whitney have in total?	 4 and 8 times tables look for patterns making links e.g. 4 times tables seeing how much each multiple is double the fours etc.  Counting stick with post it notes to support recall of times tables 3, 4 and 8.

To write and calculate mathematical statements for multiplication and division using the multiplication tables that they know,

Section 7: Division at Alderman's Green

Key Vocabulary to be taught and rehearsed	share, it's a fair share, it's not a fair share, half, equal groups,		
EYFS Division objectives	Concrete	Pictorial	Abstract
To understand how quantities can be distributed equally	  Opportunities for hands on sharing experiences in the provision	 Bar model with pictures to support understanding of finding 2 equal parts of a number, to further understand how to halves make a whole.	There are 6 cakes. Can you share them? Try saying "one for me, one for you" 

Key Vocabulary to be taught and rehearsed	Share; half; the same as; how many/much; equal; share equally; one each, two each etc; group; groups of; lots of; array it's a fair share, it's not a fair share.					
Year 1 Division objectives	Concrete	Pictorial	Abstract			
To understand division through sharing (Partitive division)			Mr Ellis has 9 sweets, and he shares them with his 3 friends. How many sweets does each friend get? $9 \div 3 = 3$ <table data-bbox="1630 777 2076 825"><tr><td></td><td></td><td></td></tr></table> Children solve problems by sharing amount into equal groups.			
To understand division through grouping (Quotient division)	How many groups of 3 can be made with 9 stars? 	There are 20 apples altogether. They are put in bags of 5? How many bags are there? 	Children solve problems by grouping and counting the number of groups. Grouping encourages children to count in multiples and links to repeated subtraction on a number line.  $20 \div 5 = 4$			

Solve one-step problems involving division by calculating the answer using concrete objects, pictorial representations and arrays with the support of the teacher.

There are 12 stars.
How many groups of 4 can be made with 12 stars?

There are 6 pupils on this tables and there are 18 pieces of fruit to shar between us. If we them equally how many will we each get?

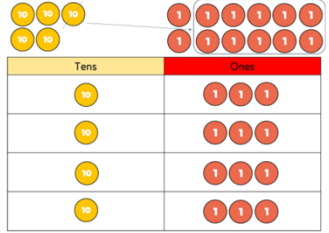

18					

Key Vocabulary to be taught and rehearsed	Share; half; the same as; how many/much; equal; share equally; one each, two each etc; group; groups of; lots of; array; divide; divided by; division; grouping; number line; left, left over																				
Year 2 Division objectives	Concrete	Pictorial	Abstract																		
To understand division through sharing (Partitive division)		 $12 \div 4 = 3$ Use of bar modelling to support.	Mr Ellis has 9 sweets, and he shares them with his 3 friends. How many sweets does each friend get? $9 \div 3 = 3$ <table border="1" data-bbox="1673 753 2074 801"><tr><td></td><td></td><td></td></tr></table> Children solve problems by sharing amount into equal groups.																		
To understand division through grouping (Quotient division)	There are 6 sweets, how many people can have 2 sweets each?  Use of counters, cubes and objects to support concrete approach.	There are 20 apples altogether. They are put in bags of 5? How many bags are there? <table border="1" data-bbox="1151 1096 1646 1192"><tr><td colspan="4">20</td></tr><tr><td>5</td><td>5</td><td>5</td><td>5</td></tr></table>	20				5	5	5	5	There are 20 bananas altogether. ?	?	?	?	?																	

Children will be show the array to represent division and making links to multiplication.	This array represents: $12 \div 3 = 4$ - posed as how many groups of 3 are in 12 Children understand that the same array can represent $12 \div 4 = 3$ if grouped horizontally. 	$15 \div 5 =$ $21 \div 3 =$						
Children will solve one-step division problems (including missing number problems) using concrete objects and pictorial representations		$12 \div \underline{\hspace{1cm}} = 6$ 	$12 \div \underline{\hspace{1cm}} = 6$ Children to use their knowledge of their times tables					
Solve problems involving division using materials, arrays, division facts including problems in contexts.	A classroom has 6 tables. Each table has 5 children sitting at it. Complete the number sentence to show how many children there are altogether. 	<table border="1"><tr><td>5</td><td>5</td><td>5</td><td>5</td><td>5</td><td>5</td></tr></table>  Children could draw pictorial representations to help understand questions of this nature.	5	5	5	5	5	5
5	5	5	5	5	5			

Key Vocabulary to be taught and rehearsed	share, share equally, one each, two each..., group, groups of, lots of, array, divide, divided by, divided into, division, grouping, number line, left, left over,								
Year 3 Division objectives	Concrete	Pictorial	Abstract						
Divide 2 digits by 1-digit (no exchange)	48 ÷ 2 =  When dividing larger numbers, children can use manipulatives that allow them to partition into tens and ones.	48 ÷ 2 = <table><thead><tr><th>Tens</th><th>Ones</th></tr></thead><tbody><tr><td>10 10</td><td>1 1 1 1</td></tr><tr><td>10 10</td><td>1 1 1 1</td></tr></tbody></table>	Tens	Ones	10 10	1 1 1 1	10 10	1 1 1 1	
Tens	Ones								
10 10	1 1 1 1								
10 10	1 1 1 1								
Divide 2 digits by 1 digit (sharing with exchange)	 Children should start with the equipment outside place grid before sharing the tens and ones equally between the rows.	52 ÷ 4 = 							

Key Vocabulary to be taught and rehearsed	share, share equally, one each, two each..., group, groups of, lots of, array, divide, divided by, divided into, division, grouping, number line, left, left over, division facts, inverse, derive		
Year 4 Division objectives	Concrete	Pictorial	Abstract
Divide 2 digits by 1-digit by sharing.	 Children should start with the equipment outside place grid before sharing the tens and ones equally between the rows.	$52 \div 4 =$ 	
Divide 3 digits by 1-digit by sharing	$844 \div 4 = 221$ 	$844 \div 4 = 211$  Place value counters to share 3-digit numbers into equal groups.	 Flexible partitioning in a part whole model support this model.

Divide 2 digits by 1 digit (sharing with remainders)	$53 \div 4 = 13r1$  Use of base 10. Start with equipment outside the place value grid. This will highlight any remainders as they will be left outside the grid once the equal groups have been made.	$53 \div 4 = 13r1$ 	 Flexible partitioning in a part whole model supports this method.
Divide 2 digits by 1 digit (sharing with exchange)	 Children should start with the equipment outside place grid before sharing the tens and ones equally between the rows.	$52 \div 4 =$ 	

Key Vocabulary to be taught and rehearsed	share, share equally, one each, two each..., group, groups of, lots of, array, divide, divided by, divided into, division, grouping, number line, left, left over, product, division facts, inverse, derive, formal written method.		
Year 5 Division objectives	Concrete	Pictorial	Abstract
Divide 2 digits by 1 digit (regrouping)	 $52 \div 4 = 13$  When using the short division method children use grouping. Starting with the largest place value they group by the divisor. Children should consider 'How many groups of 4 tens can we make?' and 'How many groups of 4 ones can we make?' Remainders can also be seen as they are left ungrouped.		
Dividing 3 digits by 1 digit (regrouping)	  Children continue to use place value counters on a place value grid. Children can also draw their counters and group them through a more pictorial method.		

		1	3	
	4	5	12	

Children should be exposed to the concrete and pictorial before moving on to this stage to develop help develop a deeper understanding on the skill.

$$856 \div 4 = 214$$

		2	1	4
	4	8	5	16

Divide 4 digits by 1-digit numbers

$$8,532 \div 2 = 4,266$$

Place value counters or counters can be used on a place value grid to support children to divide 4-digit by 1 digit. They can also draw their own counters and group them through a more pictorial method.

Children should be encouraged (when ready) to move away from concrete and pictorial when dividing numbers with multiple exchanges.

$$8,532 \div 2 = 4,266$$

	4	2	6	6
2	8	5	3	2

Dividing by 10, 100 and 1000

Gattegno chart and counters to explore dividing by 10, 100 and 1000

10,000	20,000	30,000	40,000	50,000	60,000	70,000	80,000	90,000
1,000	2,000	3,000	4,000	5,000	6,000	7,000	8,000	9,000
100	200	300	400	500	600	700	800	900

To divide numbers up to 4 digits by a two-digit number using a formal written method of short division.

$$7,335 \div 15 = 489$$

	0	4	8	9
15	7	7 ₃	13 ₃	13 ₅

15	30	45	60	75	90	105	120	135	150
----	----	----	----	----	----	-----	-----	-----	-----

To solve 4 digits by 2 digits written methods become the most accurate.

Children can write out multiples to support their calculations with large remainders.

Children will also solve problem with remainders where the quotient can be rounded as appropriate.

Section 8: Glossary - Four operations.

Addition

Addend	A number to be added to another
Aggregation	Combining two or more quantities or measures to find a total
Augmentation	Increasing a quantity or measure by another quantity
Bridging	When a calculation causes you to cross a 'ten boundary' or a hundred boundary e.g. $85 + 18$ will bridge 100.
Commutative	Numbers can be added in any order.
Complement	In addition, a number and its complement make a total e.g. 300 is the complement to 700 to make 1,000
Partitioning	Splitting a number into its component parts.
Sum	The results of an addition. Sum should not be used as a synonym for calculation.
Total	The aggregate or the sum found by addition

Subtraction

Difference	The numerical difference between two numbers is found by comparing the quantity in each group
Exchange	Change a number or expression for another of an equal value
Inverse	The opposite operation. For example addition is the inverse of subtraction.
Minuend	A quantity or number from which another is subtracted
Partitioning	Splitting a number into its component parts
Reduction	Subtraction as take away
Subitise	Instantly recognise the number of objects in a small group without needing to count
Subtrahend	A number to be subtracted from another

Multiplication

Array	An ordered collection of counters cubes or other items in rows and columns.
Commutative	Numbers can be multiplied in any order.
Exchange	Change a number or expression for another of an equal value.
Factor	A number that multiplies with another to make a product. A number that divides exactly into another number, without remainder.
Multiplicand	In multiplication, a number to be multiplied by another.
Multiple	A number which is an exact product of another number e.g. a number which is in the times table of another number.
Partitioning	Splitting a number into its component parts
Product	The result of multiplying one number by another.
Scaling	Enlarging or reducing a number by a given amount called the scale factor e.g. 4×3 means 4 scaled up by a factor of 3.

Division

Array	An ordered collection of counters, cubes or other items in rows and columns.
Dividend	In division, the number that is divided.
Divisor	In division, the number by which another is divided.
Exchange	Change a number or expression for another of an equal value.
Partitive	When dividing a number into a known number of groups (We want to know how many is in each group)
Quotative	When dividing a number into groups of. (We want to know how many groups)
Quotient	The result of a division.
Remainder	The amount left over after a division when the divisor is not a factor of the dividend
Scaling	Enlarging or reducing a number by a given amount called the scale factor.
